#### 2.1.3 Lens Covers

In order to preclude the loss of the Lens Covers when removed from the optical path of the Sight, the Lens Covers should be removed downwards. The rubber string will then attach around the Sight and mount.

#### 2.2 OPERATING PROCEDURES

# 2.2.1 Zeroing

The Sight is delivered in a centered position. Normally this means that only small adjustments are necessary, providing that the weapon rail (Picatinny Rail) or carrying handle is properly aligned.

**CAUTION:** Do not continue to adjust windage and elevation mechanisms if you encounter resistance.

The elevation adjustment screw is located on top of the sight, while the windage screw is located on the right side.

- a) Open (remove) front and rear Lens Covers (13).
- b) Turn the Knob Switch (10) clockwise until the red dot has a sufficient intensity to contrast against the target.
- c) Remove the the Caps Adjustment (1) for windage and elevation.

**NOTE:** Each click of the Screw Adjustment (11) corresponds to a 16 mm movement of the point of impact at 100 meters, (4 mm at 25 meters and 32 mm at 200 meters or 1/2" at 80 yds).

- d) Insert adjustment tool (coin, screwdriver, knife) or cartridge casing in adjustment screw slot and turn as follows:
- To move the point of impact to the right, turn windage adjustment screw counter clockwise
- To move the point of impact to the left, turn windage adjustment screw clockwise
- To move the point of impact up, turn elevation adjustment screw counter clockwise.
- To move the point of impact down, turn elevation adjustment screw clockwise.
- e) Confirm zeroing by firing at least three shots at a zeroing target.
   Check points of impact on zeroing target to confirm accuracy and repeat above procedure if required.
- f) After initial firing, ensure that the Mount and Sight are secure.
- g) Turn Knob Switch (10) to OFF position (counter clockwise).
- h) Close front and rear Lens Covers.

# CHAPTER III

#### OPERATION UNDER EXTREME CONDITIONS

- a) Extreme heat (moist or dry). No special procedures required.
- b) Extreme cold. Extreme cold might shorten battery life.
- c) Salt air. No special procedures required.
- d) Sea spray, water, mud and snow. Ensure that Cap Battery (4) and the two Caps Adjustment (1) are tightened before exposing the sight to sea spray, mud, snow or before immersing the sight in water. Hand tighten only. Keep Lens Covers closed when sight is not being used. Clean lenses with lens paper/cloth and wipe the sight dry as soon as possible after exposure to water, sea spray, mud or snow.
- e) Dust storms and sand storms. Keep Lens Covers closed when sight is not being used.
- f) High altitudes. No special procedures required.

**CAUTION:** The lenses shall never be cleaned with fingers but with lens paper/cloth. If no lens paper/cloth available:

- To clear away debris (sand, grass etc): blow away the dirt.
- To clean lenses: mist up the lenses and clean them with a soft piece of cloth.

# **CHAPTER IV**

TROUBLE SHOOTING PROCEDURES

#### 4.1 RED DOT DOES NOT APPEAR

Discharged battery: Replace battery.

Battery installed incorrectly: Remove and reinstall battery with (-) toward cap.

Battery is not making contact: Clean contact surfaces and reinstall battery.

Defective Knob Switch: Notify dealer/armourer.

#### 4.2 IMPOSSIBLE TO ZERO

Adjustment screw is at its limit: Check alignment of rail (or carry handle) to

barre

Impact point is moving: Check Mount and weapon rail (or carry handle)

stability.

# CHAPTER V

#### MAINTENANCE

- a) This Sight does not require any particular maintenance while used under normal conditions.
- b) Under severe weather conditions please refer to chapter III.
- c) Keep Lens Covers closed whenever the sight is not in use.
- d) Warehouse storage: Remove battery and allow lens surfaces to dry completely (if wet) before closing the lens covers.
- e) To clean lenses refer to CAUTION in chapter III.

THE FUTURE IN SIGHT...

# CHAPTER

#### 1 1 PRESENTATION

Aimpoint CompM4 Reflex Sight is a rugged precision red dot Sight developed mainly for military and law enforcement applications.

Aimpoint red dot sights are designed for the "two eyes open" method of sighting. which greatly enhances situational awareness and target acquisition speed. Thanks to the parallax-free design, the dot follows the movement of the user's eve while remaining fixed on the target, eliminating any need for centering. Further, the Sight allows for unlimited eve-relief and is compatible with 1st, 2nd and 3rd generation night vision devices.

The CompM4 Sight is using a AA size battery, which together with the extremely low power consumption gives an unequalled battery life.

The CompM4 combines the superior accuracy and ease of use of the well-known CompM2 model with significantly longer battery life and increased ruggedness through reinforced design.

The Sight is provided with a torque knob, Quick Release (QRP2) mount.

The Sight has a Spacer system that gives optimal height of the line of sight (optical axis) on different weapons.

#### 1.2 SPECIFICATION

Material - housing: Extruded, high strength aluminum

Surface finish: Hard Anodized, black to dark graphite grey, matte

Material - lens covers: Rubber, black

Optical magnification:

Eye relief: Unlimited, no centering required Optical coating:

Anti Reflex coating, all surfaces

Multi-layer coating for reflection of red light (650 nm)

Band Pass coating for NVD\* compatibility

2 MOA\*\* Dot size:

Switch, dot brightness:

Battery:

16 positions: 7 NVD, 8 daylight and 1 Extra Bright One AA size battery, (rechargeable 1.2V),

alkaline/lithium 1.5V or lithium 3-3.7V (acceptable

voltage 1.2 – 5.0 V)

Battery life: Over 8 years of continuous (day and night) use at

pos 12 of 16 and over 3 years at pos 13 of 16. (at room temperature and with a quality battery)

Typically 500 000 h at NVD setting

135mm (5.3") Lenath: Width: 75mm (3")

Height: 61mm (2.4"), with Spacer 70mm (2.8") Weight: 370g (13.1 oz), with Spacer 395g (14 oz)

Adjustment: Range ±2 m at 100 meters (±2 vds at 100 vds), in windage and elevation. 1 click = 4 mm at 25 meters

= 16 mm at 100 meters ~ 1/2" at 80 yards

Spacer

10. Knob. Switch

On a MIL-Std 1913 Picatinny Rail, A Spacer is Mounting:

available for optimal height

30 mm (1.2") with QRP2 mount, 39 mm (1.5") with Height of optical axis\*\*\*:

QRP2 mount and Spacer

-45 °C to +70 °C (-50 °F to +160 °F). in storage Max temperature range:

and operation

Water resistance: Submersible to 45 m (150 ft)

\* NVD: Night Vision Device

\*\* MOA (Minute Of Angle): 1MOA~ 30 mm at 100 meters or ~1" at 100 yards

\*\*\* Over top surface of Picatinny Rail

### 1.3 LOCATION AND DESCRIPTION OF MAJOR COMPONENTS

# See figure next page

Cap Adjustment (2 pcs)

2. Strap (for Cap Adjustment) (2 pcs)

Battery (AA size)

Cap Battery 5. Strap (for Cap Battery)

6. Screws (for Mount) (2 pcs)

7. Screws (for Mount with Spacer) (2 pcs)

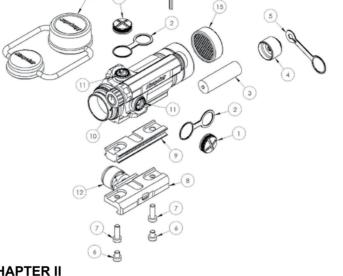

14 Allen Wrench for screws (pos.6 and 7) 15. Anti-Reflection Device (ARD)

11. Screw Adjustment (2 pcs)

13. Lens Cover (Bikini)

12. Knob, Torque (on Mount QRP2)

8 Mount QRP2

# **CHAPTER II**

#### OPERATION UNDER NORMAL CONDITIONS

#### 2.1 ASSEMBLY AND PREPARATION FOR USE

**WARNING:** Ensure the weapon is unloaded and the safety selector is in the "safe" position before attempting to install, remove or perform maintenance on the sight.

# 2.1.1 Installing Battery

- a) Remove Cap Battery (4) by turning it counter clockwise.
- b) Insert a AA-size battery with negative (-) end toward cap. Caution while replacing battery (not necessary when the sight is new). Before installing Cap Battery, inspect that the O-ring is present and not damaged. Failure to do so could result in water leakage into the battery compartment.

- c) Install Cap Battery by turning clockwise until snug. Hand tighten only. Using tools could damage equipment.
- d) Verify that red dot is present by turning the Knob Switch (10) clockwise.

# 2.1.2 Installing Sight on the weapon

The CompM4 Sight is designed for installation on most types of weapons, which have a MIL-Std 1913 Picatinny Rail.

Depending on type of weapon, the optical line of sight (the centre of the lens system) may have different optimal height over the mounting rail. The height of the optical axis of the Sight alone (without Spacer) is 30 mm (1.2"). With the Spacer (9) mounted, the height of the optical axis is increased by 9 mm (0.35").

a) Assemble the Sight with the Mount QRP2 (8) by means of the two short screws (6) and the Allen Wrench (14). Tighten firmly. Some thread glue (e.g. a "light" Loctite) could be used on the screw threads. See Fig A below.

- aa) Assemble the Sight with the Mount QRP2 (8) and the Spacer (9) by means of the two long screws (7) and the Allen Wrench (14). Tighten firmly. Some thread glue (e.g. a "light" Loctite) could be used on the screw threads. See Fia B below.
- b) Install the Sight to the weapon rail by using the Knob. Torque (12). Ensure that the Sight is correctly positioned and that the recoil stop fits into a groove on the Picatinny Rail. To ensure that Sight is secure, tighten Knob, Torque (12) until it snaps twice.
- c) When using Lens Covers, ensure that they are correctly positioned and can easily be opened/removed.
- d) Finally, make sure that the Knob, Torque (12) is firmly tightened around the weapon rail.
- e) Complete zeroing according to 2.2.1.
